

Press Release

Siae for world class microwave transmission network solutions

Milan-based **SIAE Microelettronica** is well known as one of the most technology focused microwave companies. Its long lasting telecommunication experience puts its product portfolio in a top-tier position in the Microwave Radio market. Already tested and approved by major Worldwide operators, SIAE Microwave Radios are showcased at Vietnam Comm 2007. Booth No# 3E01.

All Siae products use a dual DSP engine to carry on the same media both TDM and IP traffic. This enables our customers to smoothly migrate their network from TDM to packet. They are not concerned about redesigning their network; SIAE can provide them with future proof solutions.

The latest SDH/PDH development - **ALS** Radio System - provides scalable data rates from 4 to 622 Mbit/s with a single hardware platform across the full range of licensed frequency bands – 6 to 38 GHz. A wide choice of system configurations and tributary interfaces (PDH/SDH/FE/GE) with full SW configuration capability offers maximum versatility in system engineering and network planning. All of this makes ALS best suited for fast changing telecommunication requirements.

The **AL** – Access Link – Series is SIAE latest contribution to PDH and ETH telecommunications, with thousand units successfully operating worldwide. AL is a new concept product for the most demanding applications, definitely overtaking any other product currently available on the market. The AL Family gives to our customers up to 20% more bandwidth at a very competitive price.

SIAE PMP, WiMAX and Hyperlan solutions cover any application from legacy TDM services (ISDN, nx60Kbit/s, POTS) up to newest IP connectivity requirements. Siae offers a full range of services from radio frequency planning to complete turnkey projects, including any kind of radio technology and management facility. Siae is a member of WiMax forum since 2004.

ALFO series is SIAE full outdoor ETH radio, and it is widely considered as an almost perfect WiMAX backhaul solution.

We look forward to meeting you!
